

## Sprint 2 Report, Showcase, CAtDoEWOM, March 9, 2017

### Actions to stop doing:

1. Missing Scrum meetings - Attendance for scrum meetings this sprint was even worse than last sprint. We even moved the time of scrum meetings to try and better accommodate people's schedules. The reasons for attending scrum meetings should be self-evident. We need to have a serious sit-down as a group and talk about why we are missing these.
2. Treating deadlines as flexible - Once again, the theme of each scrum meeting was each person saying that a task was taking longer than expected and would be delayed. In the future, we need to prioritize tasks for this project, and make sure they get done on time.
3. Not fixing problems from sprint 1 - As you may have noticed, these are the same problems we had for sprint 1. In fact as you look through the rest of this document, you will probably conclude that they have gotten worse. I think this is because we saw on the burndown chart that we had gotten about a third of the project done after sprint 1, and decided we could relax. What we did not take into account was that we would be facing increased workload during sprint 2, both from the homeworks for this class and, more importantly, from our other classes, which unleashed midterm hell on us.

### Actions to start doing:

1. Merging project to form work prototypes more frequently - Our development philosophy thus far has been to develop each feature independently, and then combine at the end of the project to form a fully formed website. However, on trying to form a prototype for the end of this sprint we found that different people had set up different features in the same place (ie: one person had planned for the database of users to be displayed on the front page and another had displayed the global feed). This made us all realize how difficult merging was going to be. It also means we should have another longer group meeting to go over the design for the overall site.

### Actions to keep doing:

1. Weekly Working meetings - One thing we started during this sprint was having working meetings, where everyone (or almost) and just hammer out as much work as we could. This was the most productive portion of our sprint as little work was done outside of this (b/c of all the midterm studying). We should try to have more of these in the future.

### Work completed/not completed:

#### User Stories:

##### Completed:

- No user stories were completed but a number of tasks were completed

##### Not completed:

- As a user I would want to create collaborators with other users so that connections between projects can lead to innovation and further development of those projects.

- As a user I would like to be able to have a customized feed so that other users are able to view my projects
- As a user I would want to be able to connect to LinkedIn/Github and other platforms so that I can integrate my projects across platforms.
- As a user I would like to make projects public or private so I can keep certain projects invisible to other people until ready to be viewed.
- As a user I would like to be able to receive/give comments so I can get feedback on my project as well as be able to leave feedback on other projects

• Work completion rate:

Total number of user stories completed during the prior sprint: 0

Total number of estimated ideal work hours completed during the prior sprint: 8

Total number of days during the prior sprint: 14

For the previous sprint, the user stories/day and ideal work hours/day figures should be reported:

0 user stories/day

~.6 hrs/day (about .5hrs/team member)
